Hi Curt,

I wanted to share the following EPA website on NPL deletion:

http://www.epa.gov/superfund/programs/npl_hrs/nploff.htm For Arkwood, my understanding is that prior to full NPL deletion, the site: must have completed any reassessment and cleanup actions due to the dioxin toxicity change; groundwater must achieve Arkansas Water Quality Standards; and corrected institutional controls must be in place.

For reuse, it is my understanding that the Arkwood site can return to productive use at any time (even before full or partial deletion), as long as the remedy is not compromised. This does include the institutional controls component of the remedy which must be corrected.

I would be open to exploring any and all avenues to expedite full or partial deletion and/or reuse of the Arkwood site within those parameters. If you feel those parameters are incorrect, please let me know so I can resolve them with my management and site team. I will be in the office next week and check on the status of the inquiries you have on this site.

Thanks,

Stephen L. Tzhone
